

CRICKSTATS

Cricket Player Performance Tracking Application

A Salesforce-based application for recording, managing and analyzing cricket player performance match by match.

Goal: Digitize player records, improve accuracy, provide analytics and automate data management.

Technology: Salesforce Lightning, Objects, Reports & Dashboards and Flows.

1. Introduction & Purpose

CRICKSTATS tracks cricket players' performance on a match-by-match basis using custom Salesforce objects, relationships, dashboards and automation.

- Digitize player performance records
- Improve accuracy and accessibility
- Provide real-time analytics
- Support player development and team planning
- Automate data management

2. Ideation Phase

Problem Statement

Coaches need accurate match-wise statistics, managers need complete player records, and analysts need centralized data for comparison and reporting.

Target Users

- Team Managers
- Coaches
- Analysts
- Salesforce Admins

Problem Statements

A cricket team coach

PS-1

A cricket team coach

I am:

Track player performance across matches

But:

I cannot get accurate statistics easily

Because:

Data is stored in different files and formats

Frustrated and unsure about team selection

A team manager

PS-2

A team manager

I am:

Maintain complete player records

But:

It takes too much time to update and verify data

Because:

Most records are maintained manually

Frustrated and unsure about team selection

A sports analyst

PS-3

A sports analyst

I am:

Analyze player trends and generate reports

But:

I face difficulty in comparing performances

Because:

There is no centralized analytics system

Confused and dissatisfied.

2.3 Brainstorming & Customer Journey

- Web-based player management system
- Mobile statistics tracker
- Salesforce-integrated CRM
- AI-based performance prediction
- Dashboard-based analytics

Selected idea: Salesforce-based performance tracking platform (CRICKSTATS).

Journey: Login → Enter Player Data → Record Match Performance → Generate Reports → Analyze Results → Decision Making

Original project screenshot – customer journey

3. Requirements

Functional Requirements

- Player Registration
- Match Performance Entry
- Dashboard Generation
- Report Creation
- Flow Automation

Non-Functional Requirements

- Usability
- Security
- Reliability
- Performance
- Availability
- Scalability

3. Data Flow & Technology Stack

Data Flow: User → Salesforce UI → Player Object → Match Performance → Reports → Dashboard

Layer	Technology
Frontend	Salesforce Lightning
Analytics	Reports & Dashboards
Automation	Salesforce Flows
Backend	Salesforce Objects
Database	Salesforce Cloud

4. Project Design

The system replaces scattered/manual records with centralized Salesforce storage, automated processing and interactive dashboards.

Proposed Solution

- Custom objects: Player and Match Performance
- Master-detail relationships
- Roll-up summaries
- Lightning App
- Automated flows
- Interactive dashboards

Architecture

Presentation Layer → Application Layer → Data Layer → Analytics Layer

5. Project Planning

Agile-based execution is organized into sprints covering setup, data modeling, navigation, UI, fields, validation, automation and reporting.

Main Milestones

- Developer Account
- Object Creation
- Tabs
- Lightning App
- Fields & Relationships
- Roll-up Summary
- Flows

6. Development – Developer Account

Create and activate a Salesforce Developer account, set a password and open Salesforce Setup.

Build enterprise-quality apps fast to bring your ideas to life

- Build apps fast with drag and drop tools
- Customize your data model with clicks
- Go further with Apex code
- Integrate with anything using powerful APIs
- Stay protected with enterprise-grade security
- Customize UI with clicks or any leading-edge web framework

Development – Objects

Player Object

- Label: Player
- Plural Label: Players
- Record Name: Player Name
- Data Type: Text
- Enable required optional features

Match Performance Object

- Label: Match Performance
- Plural Label: Match Performances
- Record Name configured as specified
- Data Type: Text

Original Salesforce object-creation screenshot

Development – Tabs & Lightning App

Custom Tabs

Create tabs for Player and Match Performance from Setup → Tabs.

Original custom-tabs screenshot

Lightning App

App Name: CRICKSTATS. Use Standard navigation and include Players, Match Performances, Reports and Dashboards.

Original Lightning App screenshot

Player Fields

- Player Name – Text
- Player Number – Text
- Profile Picture – Rich Text Area
- Date of Birth – Date
- Role – Picklist
- Batting Style – Picklist
- Bowling Style – Picklist
- Nationality – Picklist
- Team – Picklist

Role: Batsman, Bowler, Batsman & Wicket Keeper, All Rounder.

Batting: Right-Handed, Left-Handed.

Bowling: Right/Left Arm Fast, Medium and Spin.

Original Player fields screenshot

Player Formula & Relationship

AVG Score

Formula Return Type: Number

IF(Matches_Played__c > 0, Total_Runs__c / Matches_Played__c, 0)

Relationship

Create the specified Lookup Relationship between Player and Match Performance.

Simple Formula

Advanced Formula

Insert Field

Insert Operator

AVG Score (Number) =
IF(
 Matches_Played__c > 0,
 Total_Runs__c / Matches_Played__c ,
 0
)

Check Syntax

No syntax errors in merge fields or functions. (Compiled size: 130 characters)

Original formula/relationship screenshot

Match Performance Fields

- Match Performance Name
- Player of the Match
- Match Result: WON / LOST / DRAW
- Runs Scored
- Balls Faced
- Fours
- Sixes
- Overs Bowled
- Wickets Taken
- Runs Conceded
- Maiden Overs
- Stumpings
- Catches
- Player – Master-Detail Relationship

Roll-up Summary

Roll-up Summary fields are created on the parent Player object in the Master-Detail relationship.

- Matches Played – COUNT
- Number of 50's – COUNT with criteria
- Number of 100's – COUNT with criteria
- Total 4's – SUM of Fours
- Total 6's – SUM of Sixes
- Total Runs – SUM of Runs Scored
- Total Overs – SUM of Overs Bowled
- Total Wickets – SUM of Wickets Taken
- Total Stumpings – SUM of Stumpings
- Total Catches – SUM of Catches

Screen Flow

Create a Screen Flow. Add a Team picklist using a Picklist Choice Set based on the Player Team field.
Then use Get Records to retrieve Player records where Team equals the selected Team.

7. Testing

- Player and Match Performance record creation
- Validation checks
- Flow execution
- Roll-up summary calculations
- Reports and dashboards
- Performance during data entry and report generation

The project notes that records should be entered in Player and Match Performance objects to obtain results.

Original testing screenshot

8. Advantages, Conclusion & Future Scope

Advantages

Centralized system • Real-time analytics • Secure platform • Scalable design • Reduced manual work

Disadvantages

Requires Salesforce license • Internet dependency • Limited offline access

Conclusion

CRICKSTATS implements a cloud-based cricket performance tracking system using Salesforce and demonstrates SDLC, Agile methodology and CRM-based development.

Future Scope

Mobile application integration • AI-based performance prediction • Video analysis • Player ranking • Public statistics portal • Multi-league support

Thank You
